

AI, Quality and Supply Chain

A revolution driven by Data and AI

Alex Dowdalls, Dylan Hoogduin
October 2024

AXVECO

Look through the lens of data

#KMEvent2024 #Symbol

Hello, our name is Alex Dowdalls

It is now very easy to:

1. Create multiple digital alter-ego's!
2. Connect via LinkedIn ->

Hi! My name is Dylan

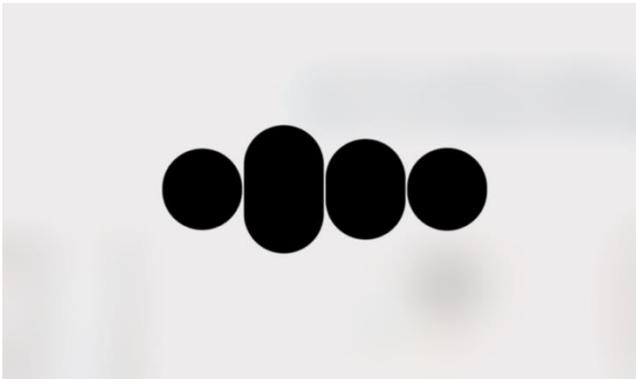

Core message...

**Those who use Data and AI
are already replacing those who don't:**

- **View** the world through the lens of data
- **Manage** data for the machine
- **Generate** *data and AI assets* for your business
- **Grow** with data

I am the world's leading expert on AI in Supply Chain and Quality Management (since yesterday...)

AI verbetert de kwaliteit in supply chain management door nauwkeurige voorspellingen, automatisering en real-time monitoring. Door AI-aangedreven vraagvoorspelling kunnen bedrijven voorraden optimaliseren, terwijl risico's bij leveranciers vroegtijdig worden geïdentificeerd. Predictive maintenance voorkomt uitval van machines en minimaliseert productiedisrupties, wat de kwaliteit waarborgt.

I can also act as your Supply Chain and Quality Management advisor, 24 hours a day, 365 days per year, answering all your questions with patience and dedication.

Where should we focus?

1. Introduction: Why Quality Management Matters in SCM

Quality management in supply chain and the challenges companies face—like maintaining consistency, meeting compliance standards, and avoiding defects.

2. AI-Powered Predictive Analytics

How AI can predict demand patterns and risks. This ensures products are always available in the right quality without overstocking or running out. Highlight how it helps with better inventory control and sourcing from suppliers with consistent quality.

3. Real-Time Monitoring & IoT

AI combined with IoT devices can monitor things like temperature, humidity, and transit conditions. Real-time data allows companies to spot issues before they affect product quality, especially for sensitive goods.

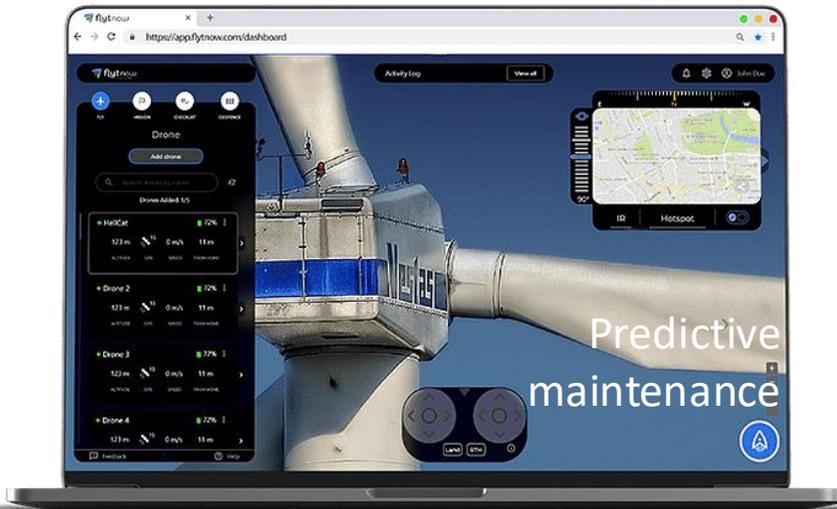

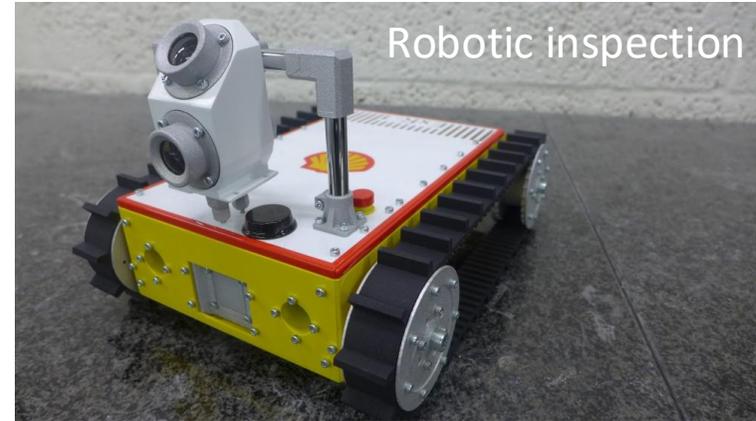

4. Automation in Quality Control

Leveraging AI-driven computer vision systems to improve product inspection, reducing human errors, and catch defects faster, ensuring higher consistency.

5. Continuous Improvement & Customer Feedback

Utilise AI to analyzes customer feedback for quality issues and recommends continuous improvements, helping companies refine their processes.

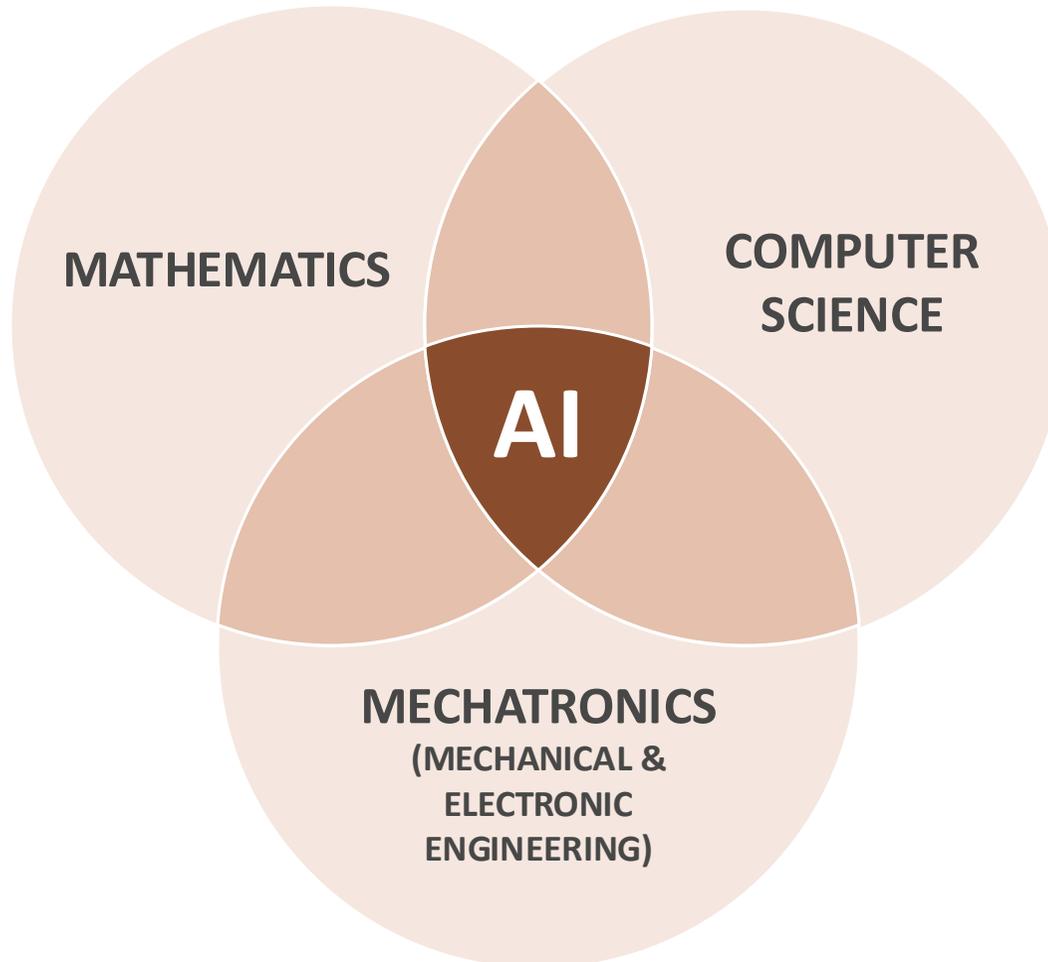

AI in industry and commerce

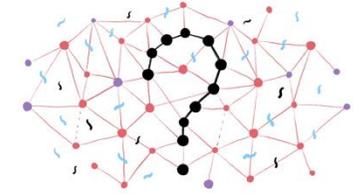

The shift in thinking..

AI is a combination of disciplines

Which problem types to consider?

Supervised Learning:

CLASSIFICATION

Is this a man/woman – dog/cat – healthy/ill

REGRESSION

Which factor has the greatest influence on outcome

FORECASTING

Are we in an epidemic, how many cases next week?

DEEP LEARNING

Let the computer identify features and associations

Unsupervised Learning:

CLUSTER ANALYSIS

Detect patterns in data, common behaviours etc

SEGREGATION

Is a transaction more abnormal than others?

ASSOCIATION DISCOVERY

Which bundles of products do customers buy?

DIMENSIONALITY REDUCTION

Which themes are present in text messages?

Reinforcement Learning:

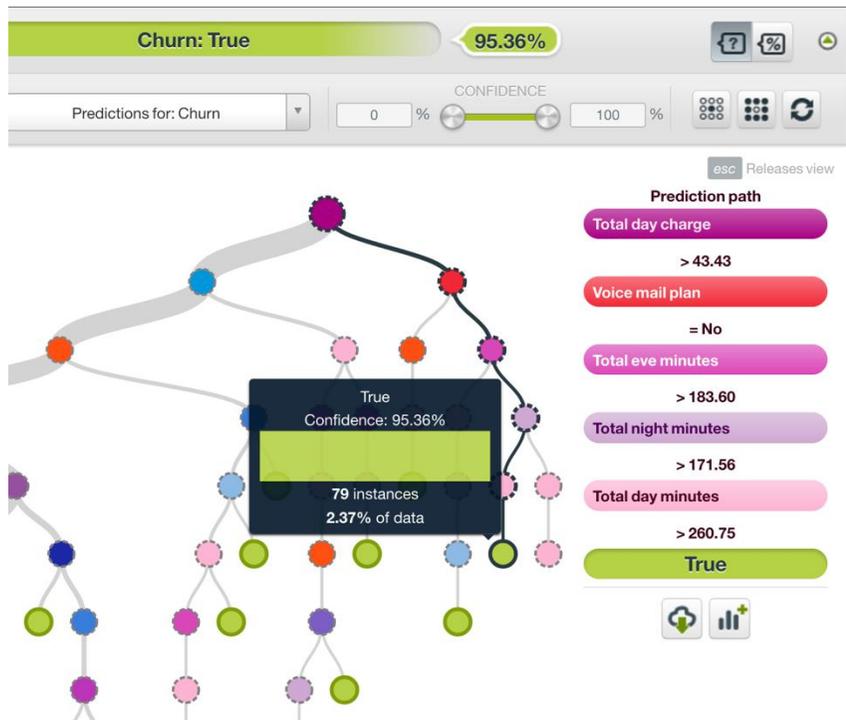

VALUE-BASED

Maximise the expected rewards given a state and action pair

POLICY-BASED

Update a policy to maximise a given reward

Predicting customer behaviour

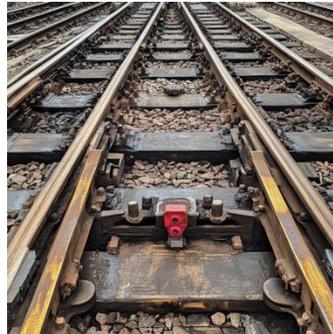

Using *classification* to predict:

- Conversion (CRO) in sales journey
- Termination of contract (churn)
- Dropout of students in an education program

Use *abnormality detection* to detect:

- Fraud
- Unusual behaviour

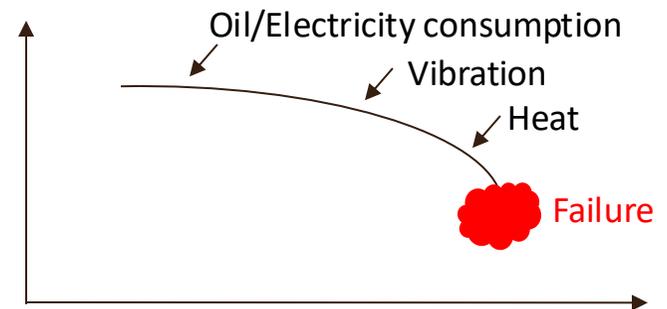

Predictive Maintenance

Using *time series analysis* to predict dropout of technical equipment

Abnormality detection in performance, vibration, heat or throughput

Plan maintenance based upon predicted wear

Anomaly Detection

ANOMALY CONFIGURATION

Number of anomalies: 10 Forest size: 128 Normalize repeats: Constraints: EXP

Advanced configuration

Anomaly detector name: creditcard Reset View anomaly detector

Name	Type	Count	Missing	Errors	Histogram
Time	123	117,557	0	0	
V1	123	117,557	0	0	
V2	123	117,557	0	0	
V3	123	117,557	0	0	
V4	123	117,557	0	0	
V5	123	117,557	0	0	
V6	123	117,557	0	0	
V7	123	117,557	0	0	

Analyse 117.557 transactions and identify possible anomalies

V1: -36.802319908...

New dataset name: creditcard top 10 anomalies dataset Create dataset

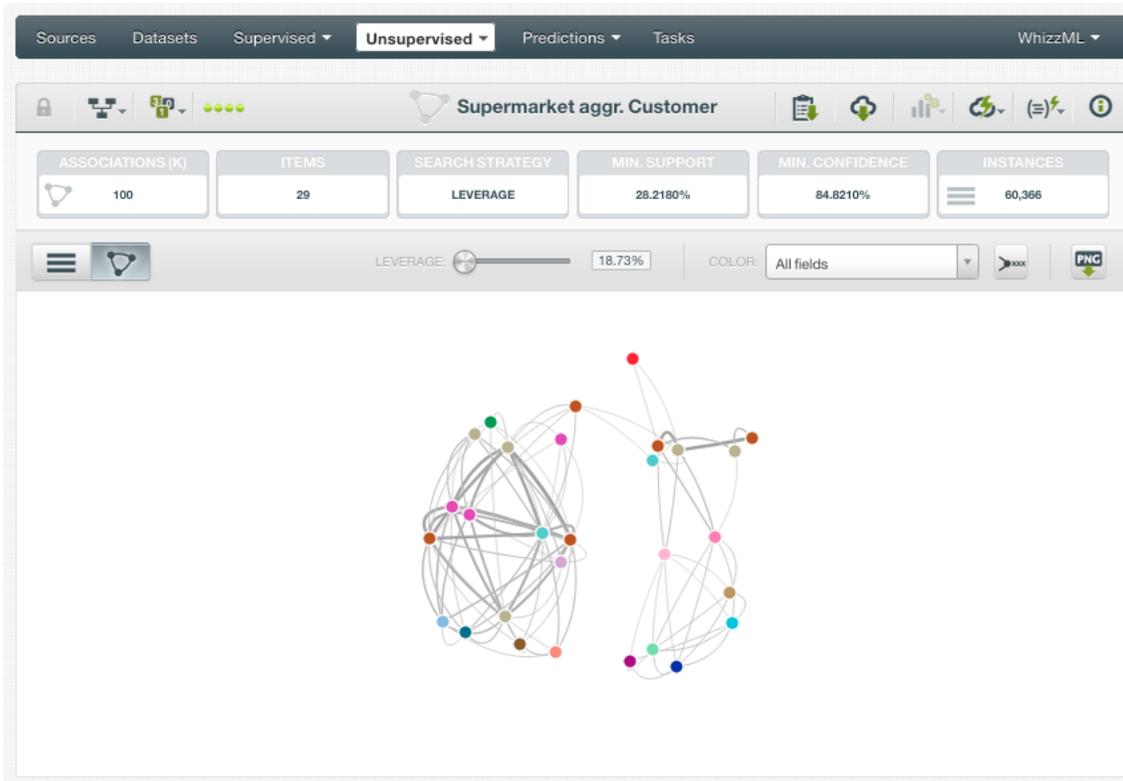

Example: Customer segmentation using cluster analysis (k-means)

Unsupervised learning

- Machine understands the data (identifies patterns/structures)
- Evaluation is qualitative or indirect
- Does not predict/find anything specific

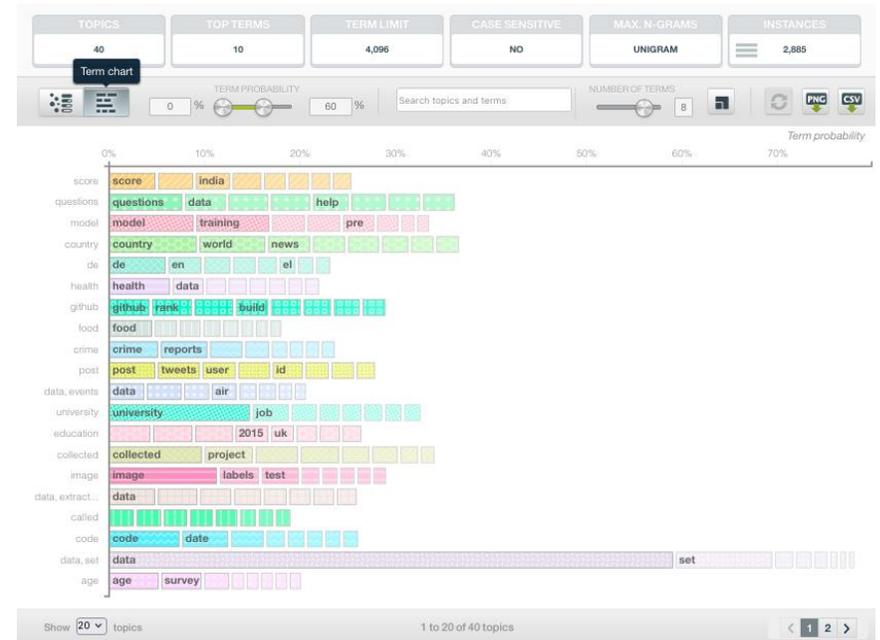

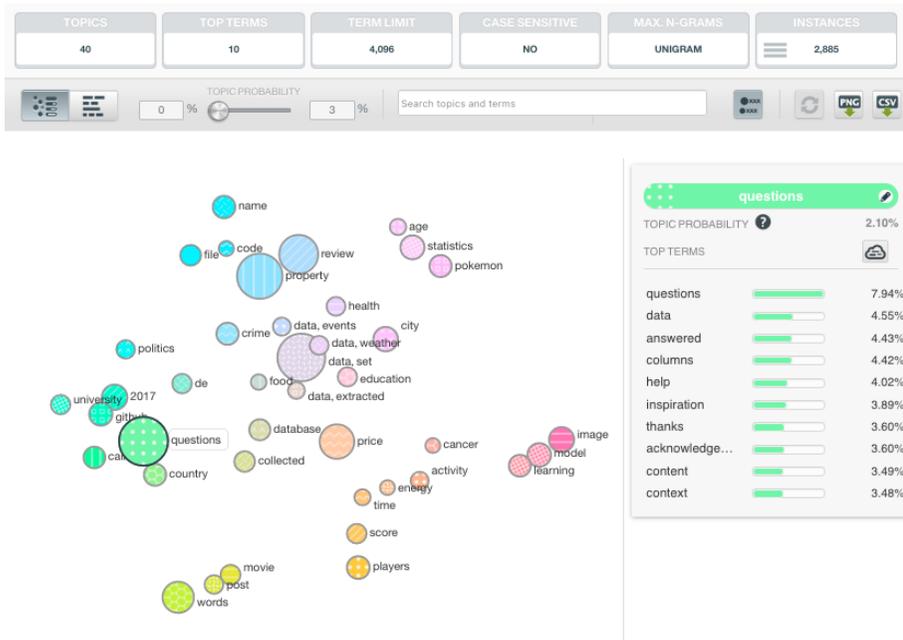

Using association discovery to analyse patterns in behaviour

Can I detect bundles of items that can be grouped together in large sets of semi-structured data?

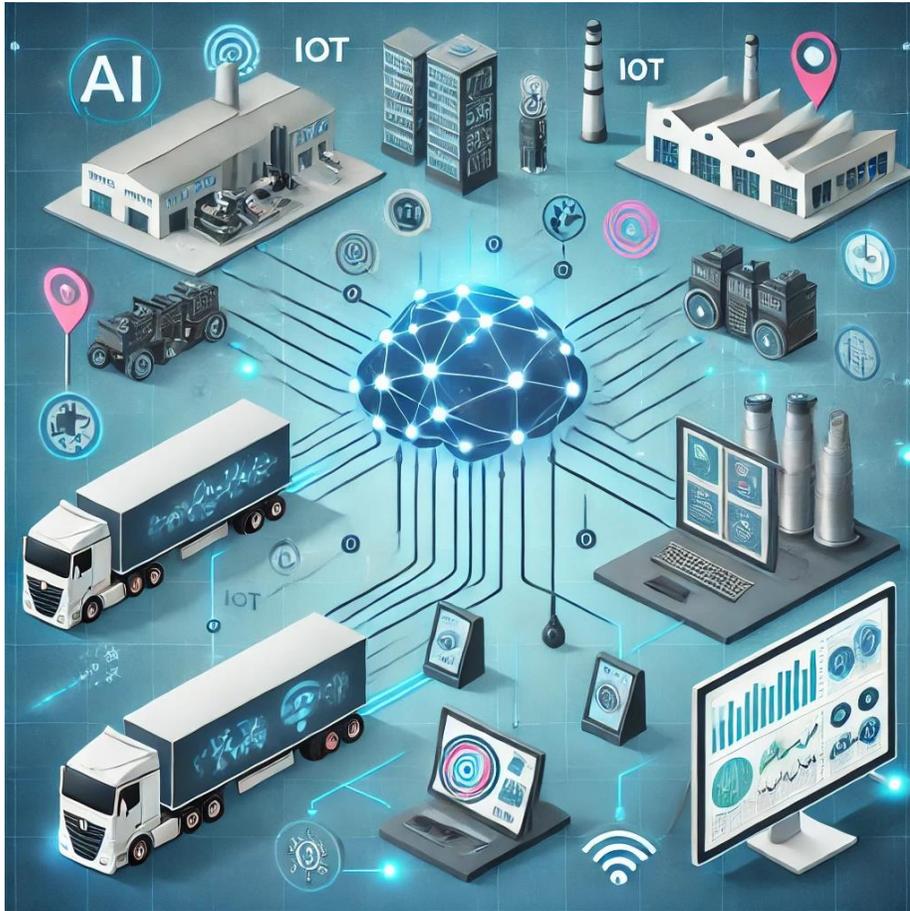

- People who buy beer also buy crisps and peanuts.
- People who buy wine also buy cheese and crackers
- People who buy nappies also buy baby-wipes and cleaning products

Topic Modelling – Analysing groupings of words in text bundles e.g. emails, whatsapps, chats etc

Word groupings can help us to classify messages and therefore analyse large volumes of messages to identify common themes

Continual Monitoring of the Supply Chain

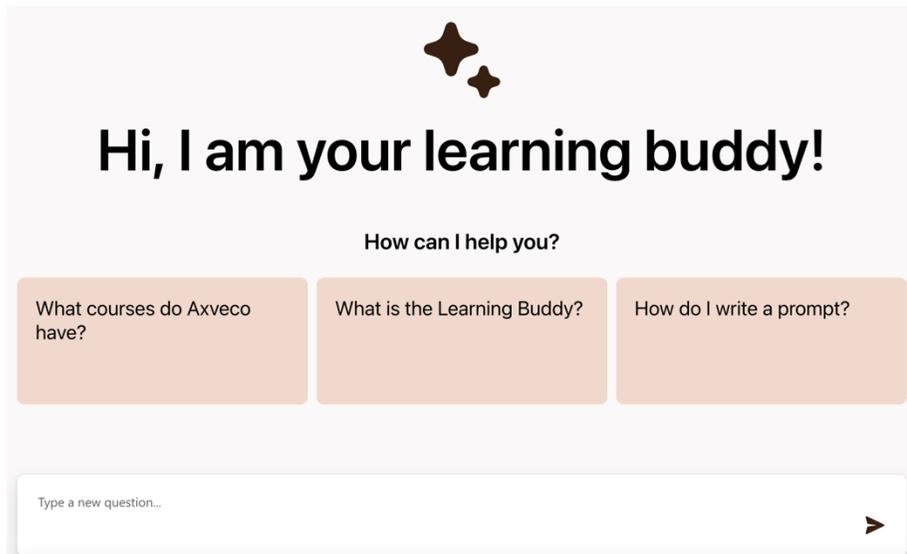

AI enhances supply chain monitoring by analysing real-time data from IoT sensors and tracking systems to improve visibility, detect anomalies, and optimize operations.

- Key areas of focus include tracking shipment conditions (temperature, humidity, location), predicting equipment failures with predictive maintenance, and identifying inefficiencies in logistics routes.

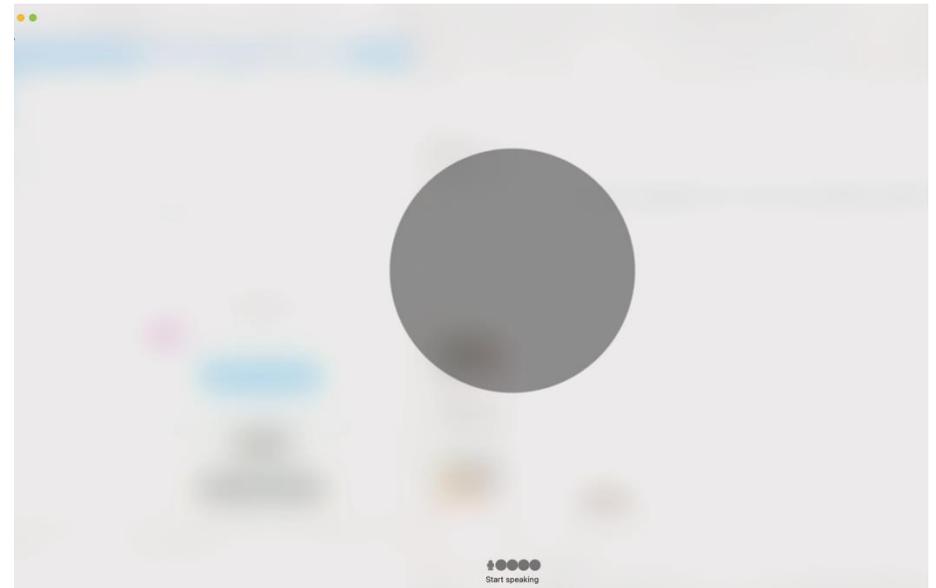

Relevant algorithms include:

- **Anomaly detection.**
- **Neural Networks** for predictive maintenance.
- **Reinforcement Learning** for dynamic route optimization and inventory management.
- **Natural Language Processing (NLP)** to analyze unstructured data, like customer feedback, for quality improvements.

Using Smart Agents for communication and process optimisation

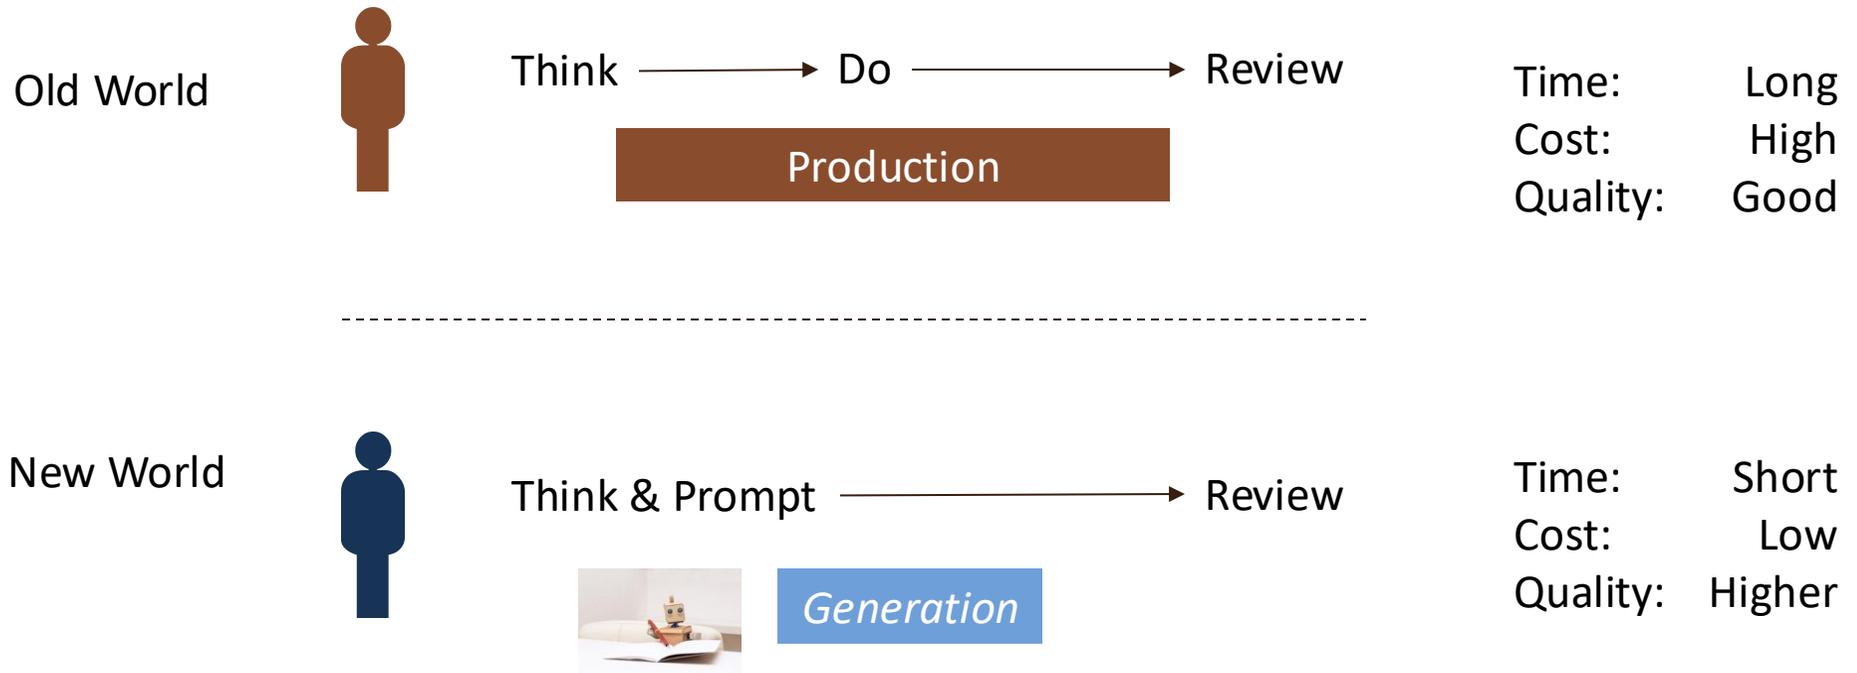

Customise a GPT with your knowledge to create a *Smart Agent*

Deploy a Smart Agent to support customer, employee or business partner interaction

Prompt Engineering - to generate any content

"The specificity of the input leads to the desirability of the output"

Layers of a Smart Agent

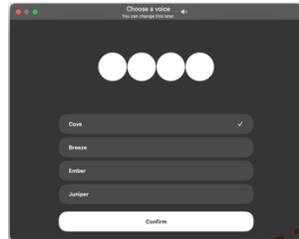

User experience

- Live Animation:
- Voice dialogue
 - Hi / Lo Fidelity
 - Mimickery
 - 2D or 3D

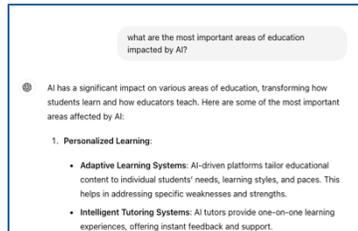

Predefined Animation(s) with voice profile

Static character

Voice interface with live interaction

Text interface

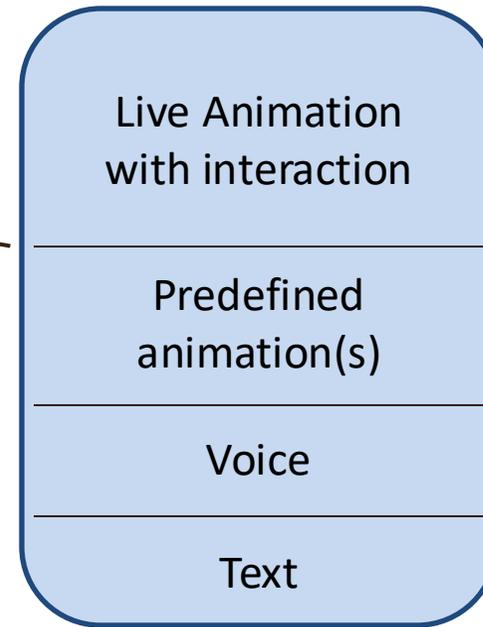

Solution Architecture

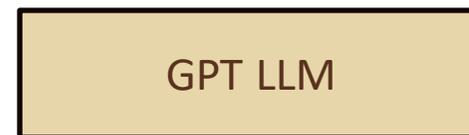

Character Design

Encoding Vectoring

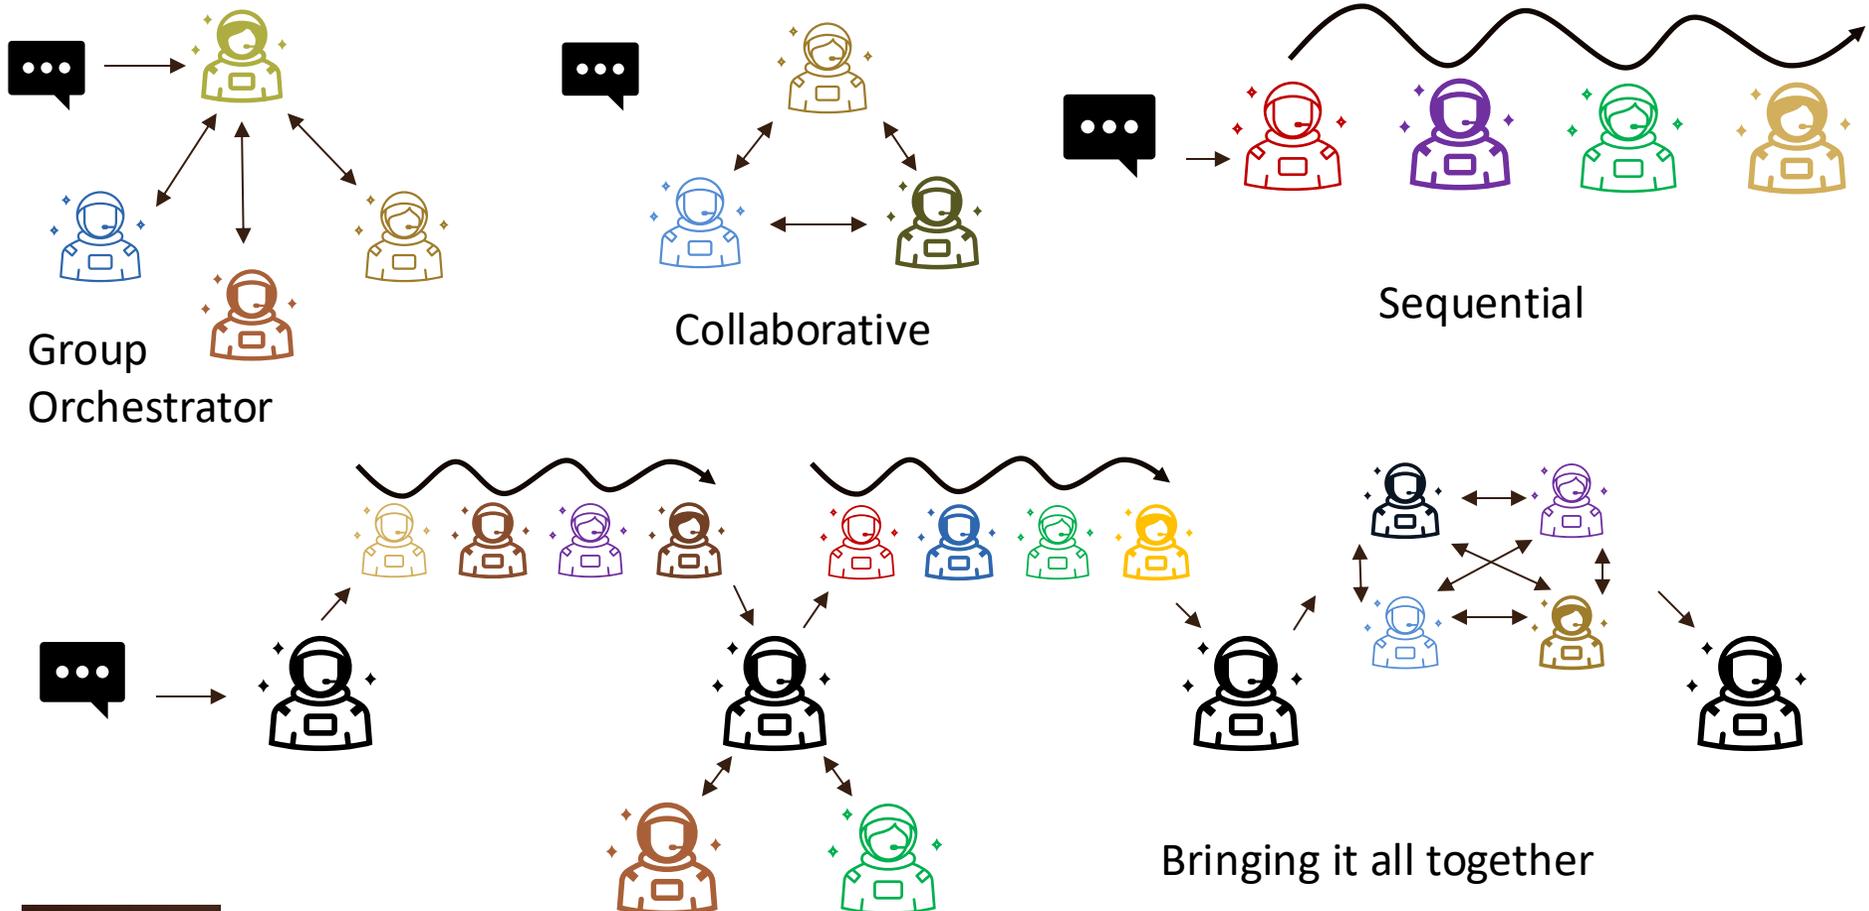

Dialogue

Using Smart Agents to automate workflow

- How agents are set to interact to solve a task...

12 July 2024 – EU AI Act formally published

News
European Parliament

Press room / Artificial Intelligence Act: MEPs adopt landmark law

Artificial Intelligence Act: MEPs adopt landmark law

Press Releases [PLENARY SESSION](#) [IMCO](#) [LIBE](#) 13-03-2024 - 12:25

• Safeguards on general purpose artificial intelligence

• Limits on the use of biometric identification systems by law enforcement

• Bans on social scoring and AI used to manipulate or exploit user vulnerabilities

• Right of consumers to launch complaints and receive meaningful explanations

The AI Act Explorer website:

<https://artificialintelligenceact.eu/ai-act-explorer/>

A risk-based approach to AI proposed by EU

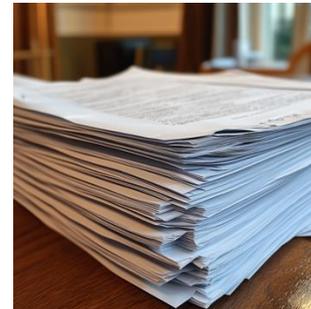

Coming soon from our Smart Agent Factory...

“EU AI Act Buddy”

- Answer questions about the EU AI Act
- Describe how to assess the status of an AI solution
- Guide to doing a risk assessment
- Reporting requirements
- Help you to adhere to the provisions of the Act

If printed in a readable format, the Act is:

- 420 pages
- 180 intention statements
- 200 pages of requirements

Executive agenda

1. Open the door to Data Driven Working and AI!
2. Provide a process to stimulate and manage data / AI innovation
 - Identify use cases in training / department workshops
 - Pitch use cases to management to select the best cases
 - Structured process to realise solutions
3. Ensure domain managers / supervisors are “AI Enabled Professionals”
 - Otherwise they don’t know what they don’t know...
 - Nobody identifies use cases!
4. Establish AI capability in your organisation
 - Build the skills for the type of AI that is relevant to your business

Trends to watch

- Autonomous Smart Agents serve humans and optimise workflows
- Language becomes the new interface to the machine
- Smart products replace dumb products
- Products are designed for input, not just output
- Immersive, 3D experience, Web3 & Metaverse
- Large scale language models present a risk to humanity

AI Enabled Professional

- Wat is er nodig van een professioneel persoon om succesvol te zijn in het tijdperk van data en AI? Welke capaciteiten zijn essentieel om te overleven in het tijdperk van AI?
- Dit programma rust je uit om data en AI te gebruiken om succesvol te zijn op individueel, team- of organisatieniveau.
- Je leert de top 10 toepassingen van AI te implementeren die nodig zijn om te overleven in het tijdperk van AI.
- En je kan het AI Brevet certificatie halen van de nederlandse AI Coalitie

Je leert:

- Waarom is AI zo belangrijk geworden? Wat maakt het anders?
- Wat is AI en waar kan het worden toegepast?
- Hoe je de top 10 toepassingen van AI kunt toepassen.
- Ethische, juridische en maatschappelijke implicaties van AI.
- Het programma is ontworpen door data- en AI-experts die samen meer dan 14.000 studenten hebben opgeleid. We geven je de mogelijkheden en tools die je nodig hebt om succesvol te zijn met AI.
